Security Warning

- Please change the password of your Foscam App account, and NVR and cameras user name regularly. The password should contain a combination of numbers, letters and special characters.
- Please keep the user name and password of your cameras, NVR and Foscam App account safe.
- Please update your device to the latest firmware regularly for an optimal user experience.

Important Safety Instructions

This chapter describes how to use the product properly so as to prevent danger and property loss. Be sure to follow the security instructions when operating this product.

The CR1220 model lithium battery is used inside the device. If other types of batteries are used, there is a danger of explosion. When replacing the battery, do not put the old battery into fire or handle it with household garbage. Please dispose of used batteries in accordance with local laws and regulations

Preface

Welcome to use our product, Network Video Recorder (NVR). This document mainly focuses on the installation and configuration of NVR application system. With high performance video, user-friendly GUI, and practical industrial designs. This series NVR is suitable for civil applications such as homes, stores, internet cafes, and small businesses in addition to mainstream security and surveillance applications.

Default Settings

NVR: Default administrator name is admin.

Declaration

- > The feature of product on this manual is just for reference. Please prevail in physical product.
- The manual provides multiple product models for reference. The specific operations are not listed one by one. Please follow the operations depending on the actual product.
- Because the actual environment may be discrepant, the actual values of some data may be different from the values provided in the manual. If there are any question or dispute, the final interpretation of prevails.
- > If you do not follow the manual during operation, you will bear any loss caused thereof.
- The NVR in the FN7108W-B4 kit can only add the IPC in the kit, and the IPC in the kit can only be used for the NVR in the kit.

Installation Environment

Precautions

- > Please keep the device horizontally and avoid inclination or inversion.
- > Do not install the wireless NVR in humid and dusty environment.
- > Put the wireless NVR in drafty environment in case of ventilation port being blocked.
- > Don't touch the power switch with wet hand or damp items to avoid shock.
- > Do not splash liquid or metal filing on the NVR To avoid short-circuit fault or blaze.

- Explosion may happen because of improper replacement of battery, do not replace it by yourself; If you need, make sure it is the same type of battery. And do not open or repair it.
- > Do not take the device apart when it is operating (or connecting to power).
- > Please use suitable and professional hard disk to ensure continues and stable recording.
- Lightning protection is needed when device is connected to communication cables. Ethernet cable which comes form outside, connecting to the wireless NVR directly is forbidden.
- > Check the power supply to avoid damage because of voltage mismatch.
- > Make sure the wireless NVR working within suitable temperature and humidity environment.

Short circuit may occur when dust become wet on circuit board. Please clean the dust on circuit board, connectors, and NVR case.

1 Overview

1.1 Product Introduction

This document introduces a series of NVR products, including: FN7108W-B4 Kit, FN8108H, FN8108HE. This advanced product series receives a high quality video stream that is transmitted digitally by the IP Camera (IPC). The product can perform live video preview, recording, playback, remote access, and backup simultaneously.

1.2 Key Features

Network Monitoring

You can access the NVR system remotely through the Video Management System (VMS) and Foscam APP, or access the NVR system locally by using the display or monitor.

Multi-screen Preview

Multi-screen preview indicates that several pages are displayed on the screen of the monitor based on the same scale.

Recording

The NVR supports recording and storing video files on a Hard Disk Drive (HDD). Stored videos files can be queried or played back through local GUI.

Recording can be classified into schedule recording, and alarm recording from low priority to high priority. If recording of any two types is enabled at the same time, only the recording of a higher priority takes effect.

Schedule recording

You can select the scheduled time segment to enable or disable recording.

• Motion detect recording

After the motion detect is enabled and recording is selected, motion detect recording is enabled when motion detection is triggered in the detection time segment and detection area.

Alarm recording

After the Shelter is enabled and recording is selected, If the video is occluded, the video channel

will have an alarm flag alert that triggers an alarm and alarm logging will be enabled.

📙 Note

When NVR system time and IPC time are different, the NVR recording will based on the NVR system time.

Playback

You can play recording video files stored in the Hard disk. Recording includes schedule recording, manual recording, motion recording and alarm recording. Single-screen playback, four screens or nine screens synchronous playback are supported.

Alarm

Motion Detection Alarm

You can configure motion detection information about the corresponding channel in the NVR system. When an object moves in the detection time segment and detection area, an alarm is triggered, the NVR system enables motion detection recording, sends pictures to your mailbox.

Manage

You can search for IPC devices in the LAN through the NVR and add IPC devices to the NVR channel. Through the NVR, you can also manage IPC devices.

HDD Management

When the HDD becomes exceptional (for example, HDD Loss, HDD Full, and HDD Error), the NVR buzzer sounds an alarm.

When the HDD is full, you can select the cycle cover the earliest recording or stop recording.

Only FN7108W-B4-1T kit has a 1T hard drive installed at the factory.

Other Functions

- Support the logging function.
- Support local GUI output and perform shortcut operations through the mouse (left click to select, right click to return to the previous menu).
- Three roles can access the NVR, which are respectively visitor, operator, and administrator. The

rights of the three roles vary from low to high.

1.3 Relevant Version

Name	Recommended Configuration
	You are recommended to equip a 16:9 monitor with the resolution higher than
	1920 *1080. The maximum resolution of NVR support displays is 2560
Monitor	* 1440.
Network	10/100M Ethernet or above.

1.4 Hard Disk Installation

If your NVR is FN8108H or FN8108HE, you must install the hard disk to the NVR. FN7108W-B4-1T kit has a 1T hard drive installed at the factory.

- Before installing a hard disk drive (HDD), please make sure the power is disconnected from the NVR.
- It is recommended that a hard drive be used in 7200 high-speed or above.

Step 1: Remove the cover from the NVR by unfastening the screws on the rear and bottom.

Step 2: Connect one end of the data cable and power cable to the motherboard of NVR and the other end to the HDD.

Step 3: Place the HDD on the bottom of the device and then fasten the screws on the bottom to fix the HDD.

Step 4: Re-install the cover of the NVR and fasten screws.

2 GUI

Please refer to the Quick Setup Guide if you install the NVR for the first time. You can visit the local NVR device via the display or monitor, and view or manage NVR system.

2.1 Before Starting

You need to know some basic information before you log on to the NVR system with the monitor or display.

2.1.1 Icons Description

In the live view mode, there are icons at the left top of the full screen.

EVAL: The HDD is full, and the recording has been stopped. A HDD is not inserted into the NVR or the HDD connected to the NVR is abnormal.

In the live view mode, there are icons at the right bottom of the screen for each channel,

 : Human Detection Alarm. Identify whether someone is moving within the range of the camera. Only FN7108W-B4 kit supports this function.

: Motion Detection Alarm. The motion is detected during the detection time in the detection area, the NVR will alarm.

: NVR is recording for the IPC.

EVE: You can click this icon to control whether IPC records sound.

奈: Shows the strength of the IPC wireless network.Only FN7108W-B4 kit supports this function.

2.1.2 Common Operations

Starting Up the NVR

Turn on the power, The Power indicator LED should turn green indicating that the device begins to start up.

Note

If the power LED indicator on the front panel is off, please check if the power supply is plugged into an electrical outlet.

Shutting Down the NVR

Proper ways to shut down the NVR in the GUI interface: After login, right-click the mouse, you can click **Shutdown** in the shortcut menu. Choose **Shutdown**, click the **OK** button in the confirmation box. Then turn off the power switch on the rear panel, the power LED indicator on the front panel turns off.

Don't turn off the power directly when you turning on.

Reset

You can reset the NVR device to restore the factory settings. You can choose any one of the following methods operate.

- Reset button: Press and hold it for 3 seconds to reset all parameters to factory defaults on the bottom of the NVR.
- Local GUI: Right-click the mouse, Choose Main Menu > Restore in the Menu interface, then choose to restore defaults in the Restore factory settings interface.

2.1.3 USB Mouse Operation

Plug USB mouse into one of the USB interfaces on the rear panel of the NVR.

The operation of the mouse on the local GUI is shown as below.

Name	Action	Description
Left-Click	Single-Click	Menu or window: select and enter.
	Double-Click	Preview mode or Playback mode: Switch between single-screen and multi-screen.
	Click and Drag	Time or Area box: Select the time or zone range. Time bar: Drag time bar.

		Live view: Moving channel arrangement order.
Right-Click	Single-Click	Live view: Show menu.
		Menu: Exit current menu to upper level menu.

The Single-Click mentioned in this article is refer to the left mouse click.

2.2 Login

For your security, please set a new password for your NVR before Log In.

	Change Password
*You need to set an initi	al password for the first use.
User Name New Password Confirm Password	
	Save

Login page.

Enter the Username and Password, then click on the **OK** button. You will be taken to the Setup Wizard.

2.3 Guide

By default, the Guide starts once the NVR has loaded. The Guide can walk you through some important settings of the NVR. If you don't want to use the Guide at that moment, right click the mouse to quit.

1. Setting the system time, date format, language, resolution of the monitor and so on.

	Startup Wizard	
System Time Date Format Time Zone Language Resolution Auto Logout(min) DST IPC Time Sync	2021/ 03/ 16 14 :29 : YYYY MM DD 24 (GMT+8:00)Beijing English 1280x1024 0 Setting ✓	38 · · ·
		Next Skip

2. Format HDD.

Click the Format button to set up the HDD. Note that this will delete all files on the HDD.

HDD Full Setting. Select Stop Record or Overwrite.

Model	Capacity	Free Capacity	Status
WDC WD10EJRX-89N	931(G)	692(G)	Recording
HDD Full Overwrite Adeo Storage Enable 🔲	<u> </u>		

Note

Only FN7108W-B4-1T kit has a 1T hard drive installed at the factory.

3. Network

You can set up the network information for the NVR.

4. P2P.

If you want to know the UID of the device, please scan the QR code. If you don't want to use the Setup Wizard next time, check **Not show again** checkbox. Click the Finish button to complete the setup wizard.

Note

The P2P in this article is only an example, please refer to the actual situation.

You can also Right-click "Main Menu > Configuration", uncheck the Startup Wizard checkbox. Click the Save button.

2.4 Shortcut Menu

After login, right-click the mouse, you will enter the shortcut menu.

Only FN7108W-B4 kit

FN8108H/FN8108HE

Right-click in live view mode and select screen from the Shortcut Menu, you can choose

4-screen, 8-screen or 9 screens.

2.4.1 Channel Config

Channel Config(FN8108H/FN8108HE)

Right-click in live view mode and select **Channel Config** to enter the **Channel Config** interface, On this page you can see device status such as channel, Status, IP Address, MAC Address, Add IP Camera, Modify IP, Delete/Modify/move up/move down added device.

You can add an IP Camera that is connected to the internet on the NVR.

Step 1: Right-click on main interface, select Channel Config.

Step 2: Select your IP Camera or Auto added IPC.

Step 3: Click Add.

Step 4: Enter username and password of the camera. If your camera is in the factory default state, you do not need to enter the user name and password.

Step 5: Click OK.

- Chennel Config			Chann	el Cantig

Select a protocol depending on which IP Camera you have.

- FOSCAM protocol: The High Definition (HD) IP Cameras for Foscam.
- ONVIF protocol: IP Cameras which support ONVIF protocol.

Pair IP Camera(Only FN7108W-B4 kit)

Right-click in live view mode and select Pair IP Camera to enter the Pair IP Camera interface,

On this page you can see device status such as channel, Status, MAC Address, Remove and Add IP Camera.

🛄 Note

The NVR and IP Camera are already paired. If you need to match more cameras (Only FI9910W), please refer to the following steps.

Click **Pair** button and press the Reset button of the camera tail cable at the same time, until it prompts that the pairing is successful. When finished code matching, The live view interface will show you the video feed of each IP Camera.

Channel	Status	MAC Address	Operation

Auto Bridge

By new mesh network auto-bridging function, without any manual setting, wireless camera in further area will have a judgment about the WIFI signal and auto connect to the camera which have a better WIFI signal, to achieve more stable and reliable video transmission.

Auto bridging is designed to expand the coverage area of wireless signal, instead of

enhancing the signal. When camera is a little far away from NVR, or there are too many interference factors/sources between them, camera in further area will auto bridge/connect to the one nearby to transmit the video data.

Right-click in live view mode to enter the **Pair IP Camera** interface, click **Repeater** button.Then, bridging relationship will be showed on the interface automatically.

2.4.2 Main Menu

Right-click in live view mode and select **Main Menu** to enter the **Main Menu** interface, it includes Configuration, Display, Record, Backup, Network, HDD, User, Event, Restore, Upgrade, IPC Config, please refer to **2.5 Main Menu**.

2.4.3 Playback

You can display the video of every a channel for playback.

Right-click in live view mode and select **Playback** to enter interface. It supports single-screen, four screens or nine screens.

On this page you can view the record files stored in the hard disk.

- 1. Select a date with recording in calendar.
- 2. Check the checkbox from Channels. You can select up to nine channels for playback at the same time.

Manage the recording

Button	Description
D / 1	After select the matched recorded file, click the button to play or pause.
	Stop
	Single Frame
A	Fast backward. The fast backward speed can be 4 times, 8 times or 16 times of the normal playing speed. Click this button. The multiple of normal playing

	speed is displayed in the lower right of the fast backward icon. For example,
	(41/4 12:36:04) indicates the current fast backward speed is four times of the
	normal speed.
\Rightarrow	Fast forward. The fast forward speed can be twice, 4 times, 8 times or 16 times
	of the normal playing speed. Click this button. The multiple of normal playing
	speed is displayed in the lower right of the playback page. For example,
	▶4x 12:34:30 indicates the current playing speed is four of the normal
	speed.
()	Audio
=	Backup. Click this button and you will go to the backup page
*	Cut. See below the table for details.
®,	Log. Click this button and you will go to the log page.
0	Full Screen

Cut

Step 1: Click , you will go to the Cut interface.

Step 2: Choose the Channel, Type, Date.

Step 3: Click Search to find the recordings available.

Step 4: Select Add Flag, then double-click left mouse to select the start time and end time.

Step 5: Insert USB flash drive to the USB port located at the rear of your NVR.

Step 6: Click **Backup** button to save the video information to the USB flash drive. Tips are available after the backup is complete

2.4.4 Record

Right-click in live view mode and select **Record** to enter **Record** interface. Choose recording channel, click **Save** button (Actually, the Wi-Fi NVR system have default set 24h scheduled recording).

In the Live View mode, the icon is at the bottom right of the screen for each channel, indicating recording is on going.

If you want to modify it to alarm recording, please use the left mouse button to select the time

(turned to green), if the other channels operate in the same way, select **copy** button.

If you want to check the record, right-click in live view mode and select "Main Menu > Playback". Choose channel and date, then click timeline to check record.

2.4.5 Backup

Insert USB flash drive to the USB port located at the rear of your NVR.

Right-click in live view mode select **Backup** to enter the **Backup** interface.

- Step 1: Choose channel, type and time.
- Step 2: Click Search button.
- Step 3: Select target file.
- Step 4: Click Backup button to finish backup.

Note

If target file can not be searched out, please click empty to add. Please remove the files which is no need before backup. Ensure insert device (like USB) in 30 second, as system reserved searching time for it is 30 second.

Maintenance

Choose Maintenance to set up the upgrade information for the IPC.

Step 1: Download the firmware to the USB flash drive.

Step 2: Insert USB flash drive to NVR USB port.

Step 3: Right-click in live view mode and select "Main Menu > IPC Config > Maintenance".

Step 4: Click Refresh button.

Step 5: Choose the channel to update this camera or click **Select All** to upgrade your all cameras.

Step 6: Click Refresh button.

🛄 Note

- The upgrade file must be placed under the root directory of the USB flash drive.
- Don't lose power for during upgrade.

IPC Restore default:

Step 1: Right-click in live view mode and select "Main Menu > IPC Config > Maintenance".

Step 2: Click CH to restore default this camera or click Select All to restore default your all cameras.

Step 3: Click Restore IPC button.

2.4.8 Info

Right-click in live view mode and select "**Info > log**", you can search the log information of the NVR. The log record shows recording time and accessed information.

If you want to back up the log information, please insert USB flash drive to the USB port located at the rear of your NVR, and then click the **Backup** button.

If you don't want to display the startup wizard every time you turn it on, please uncheck the **Startup Wizard** checkbox.

2.5.2 Display

Display

Right-click in live view mode and select "**Main Menu > Display**" in the Main Menu interface. The **Display** interface is displayed. You can set the Channel Title, Time Title, Channel Title, Record Status, Alarm Status.

			Main Menu	_
Display	Tour		Display	
Channel Title			Setting	
Time Title Channel Title Record Status Alarm Status		זס	WHITE	
			Save	Cancel

Tour

Right-click in live view mode and select "**Main Menu > Display > Tour**" in the Main Menu interface. The **Tour** interface is displayed.

After the user sets the Tour function, NVR will play several channels of video on the display at the same time according to the interval time set by the user. After each channel plays for a few seconds, it will automatically jump to the next group of channels for cyclic playback.

Step 1: Check the Enable.

Step 2: Set the Interval(sec).

Step 3: Click the add button to select which channel videos can be played within each group.

Step 4: Click Save button.

				Tour

If you want to set other channels to be the same, you can select the "Copy To", then click **Copy** button.

2.5.9 Restore factory settings

Right-click in live view mode and select "**Main Menu > Restore factory settings**" in the Main Menu interface. The **Restore factory settings** interface is displayed. On this page you can choose which you can restore the factory settings.

2.5.10 Upgrade

You can upgrade your NVR system with local Software.

Step 1: Download the firmware to the USB flash drive.

Step 2: Insert USB flash drive to the USB port located at the rear of your NVR.

Step 3: Right-click in live view mode and select "**Main Menu > Upgrade**" in the Main Menu interface.

Step 4: Click Refresh button in the Upgrade interface.

Step 5: Select the firmware from the USB flash drive.

Step 5: Click Upgrade to upgrade your NVR.

📖 Note

Don't shut down the power during upgrade. After upgrading, NVR restarts.

2.5.11 IPC Config

Right-click in live view mode and select "**Main Menu > IPC Config**", you can set the Image, OSD, Encode, Advanced, Maintenance for the IPC. For detailed operation, please refer to 2.4.7 IPC Config.

2.5.12 Channel Config

Right-click in live view mode and select "Main Menu > Channel Config" to enter the Pair IP Camera interface . please refer to 2.4.1 Channel Config.

${f 3}$ Access the NVR in Foscam App

3.1 Download the Foscam APP

Please refer to the *Quick Setup Guide* if you install the NVR for the first time. You can start to learn about software operation after finish quick installation.

Scan the QR code below to download and install the Foscam APP.

3.2 Create A Foscam Account

You can create a Foscam account for the first time. Run the Foscam APP, and then register for a Foscam account.

Step 1: Click Foscam app icon to enter the login page. Click Sign Up to create account.

Step 2: You need to choose your region, then enter the mailbox name and new password.

Step 3: Check Accept Privacy Notices and Terms of Service, and click Sign Up.

<	Create Account	
	6	
foscam	pfoscam	
	Ø	•
	ibe Foscam Email Privacy Notices and Terms of Service	
	Sign Up	

Step 4: The system will send activation information to your mailbox, and you need to log in to your mailbox to activate your account.

3.3 Add Device in Foscam App

Open the foscam APP and please sign in if you have one already. After logging into Foscam APP, select "+" icon on the upper right corner. The Add Devices interface is displayed.

🛄 Note

Please make sure that the NVR and your phone are both in the same Local Area Network (LAN).

You have the following methods to add devices.

• Select "Scan the QR code" and scan the QR code that labeled at the bottom of your NVR.

- Select "Search in LAN" to search for the device.
- Select "Others", You can manually add device information in three ways: UID/DDNS/IP Address.

🛄 Note

Neither FN7108W-B4 kit nor FN8108H/8108HE supports DDNS connection.

After the addition is successful, NVR video will be displayed in the Foscam app.

3.4 Foscam APP Surveillance Window

You can start to learn about software operation after finish quick installation.When you launch the Foscam App, the devices page displays. _____ Split Screen

3.5 Watch Live

Click device in list to enter preview interface, select a channel to view it's picture, as follow shows:

Back: To stop viewing and listening to the live feed, tap the Back.

Resolution: There are two types to identify different streams you have set. If select the FHD Mode, the clearer video will become, and it will take up more bandwidth; If select the SD Mode, the video will not be as clear as FHD Mode, and it will take up less bandwidth.

If you want to catch the smaller details, pinch and drag any image as you do with photos on your smart phone.

Snapshot: Click this button to Snapshot the image.

Video: Click this button to start the recording function.

Setting: Click this button to set more.

Date: Display the date.

Full screen: Click this full screen button, you can live in full screen.

Bit Rate: You can see the current connection bit rate.

Mirror: You can flip the image horizontally/vertically with this button.

3.6 Setting

Tap I the button, goes to Settings to make advanced NVR settings.

3.6.1 NVR Info

You can modify the NVR name. You can also see the basic information of the NVR through this, such as NVR model, UID, MAC ID, NVR firmware version information, IPC firmware version information.

<	NVR Info	Save
NVR Nam	5:	
NVR		
Model: FN7108W		
UID: A6ROVNWC	VIIKPYCVZZZZ428H	
MAC ID: 0049838BF	D2D	
NVR Firmv 2.0.0 _ 6.1.3	vare Version: 3.140000	
	are Version 1.05.08-210425 _ V1.05.08-	210425

O Note

The data in the figure is only an example, please refer to the actual situation.

3.6.2 NVR Firmware

You can see the current NVR's firmware version and whether there is new software that

needs to be upgraded. If there is new firmware, you can click the "Upgrade" button to upgrade.

3.6.3 Camera Firmware

You can see the current camera's firmware version and whether there is new software that needs to be upgraded. If there is new firmware, you can click the "Upgrade" button to upgrade.

3.6.4 Recording Playback

You can query the recording playback content according to the time, type, and channel.

3.6.5 Hard disk information

When the HDD is full, you can check the Loop Coverage to select the cycle cover the earliest.

You can see the HDD information of the NVR.

You can format the hard information by clicking the Format the hard disk button.

K Hard Disk I	nformation
Loop Coverage	
Capacity	
Total:931.5G	Available:880.4G
Numbering	1
Status	Backup
Types	SATA
Format the	hard disk

3.6.6 Reboot NVR

Click **Reboot NVR** to reboot the NVR. This is similar to unplugging the power to the NVR.

3.6.7 Delete NVR

You can click **Delete NVR** button to delete the NVR from the app, or delete and keep history files from the app.

Are you sure to delet	e your NVR device?
Delete the history f	files of the device.
Cancel	ок

4 Surveillance Software Foscam VMS

Foscam VMS is a new tool for PC. It does not require plug-ins and is compatible with Windows & Mac, It supports all Foscam HD cameras and up to 36 cameras at the same time.

It is recommended that you first use the cloud account registered by the Foscam app, and then use the local account.

4.1 Software Installation

If you would like to manage multiple cameras, we suggest you install the Foscam VMS.

You can download and install the "Foscam VMS" in the following ways.

- Windows: <u>foscam.com/vms</u>
- Mac version from the APP store: <u>https://apps.apple.com/cn/app/foscamvms/id1521202507?mt=12</u>

After the installation is complete, the picture shown below will appear.

📙 Note

Please make sure that the NVR and the computer are both in the same Local Area Network (LAN).

4.2 Create A Local Account

You can create a local administrator account.

For security, it is strongly recommended to create local accounts and password management, which prevents the entry of intruders.

Step 1: Click Foscam VMS to run Foscam VMS.

🛄 Note

If you have created an account in the Foscam app, you can click **Login with Foscam Account** to log in.

Step 2: Click Login with Local Account to enter the Create A Local Account interface.

←	Create A Local Account	×
	P

	Add	Cancel	LAN add

Step 3 Click Add button.

Step 4 Enter Device account and Password of the NVR.

Dev	ice account	
Please enter the devi your device.	ce account and password	for
Device account :		
Password :		

Step 5 Click Add button to finish adding device.

4.4 Surveillance Software GUI

First time you login the software, the whole video window is gray, you need to connect the NVR and add NVR to it.

Section1 Menu Bar

Path to surveillance window. Click this button enter to Device List and back to the surveillance

window.

Playback the video recording, you can choose Cloud Playback, SD Card Playback, NVR HDD Playback or Local Playback.

Login your Foscam cloud account to view alerts.

Login your Foscam cloud account.

Add Device, please refer chapter 4.3 Add Device for the detail setting.

More, You can Setting Personal Account, Preference, My coupon, Log Query, Left

Bar and Switch Account.

Section2 Left Bar

Add Group: Click the + Add Group button, you can group the device list according to your needs.

Left Bar of Live: You can view the list of connected NVR.

Select the icon in the right side of the NVR list to do the following.

1-----Reconnect

Click Reconnect button and the device will reconnect.

2----- Move To

Click this button, you can move the device to your group list.

3-----NVR HDD Playback

If you have an HDD on your device, click this button to enter the NVR HDD Playback.

You can query the recording information of the hard disk by channel, record type, and date of record.

۵ (ف	SD NVR	4	NVR HDD Playback	i i	F		513@qq.com	8 – 🗆 ×

4-----Delete

Click the button, Delete the device.

5----- Setup

Click Setup button, goes to Device Settings Control Panel to make advanced NVR settings.

Section3 Live Window

When the mouse is placed on the video, the icon shown on the following figure appears.

1----Close

Click the icon to close this channel live window

2-----Device Name

Show view channel and camera name.

3-----Recording and Alarm status

This icon will turn to red, it indicates that the camera is recording

4----- Record / Snap Shot / Sound

Record ----- Click it and do manually recording. When recording, icon 1 will turn to blue. Click it again and stop recording. The recording files will be stored to C:\VMS_RECORD automatically.

Snap Shot ----- Click it to make snapshot. After snapshot, the button banner will prompt **Captured Successfully**. And you can find the picture on default path C:\VMS_CAPTURE.

Device	×
Success, Picture: C:\VMS_CAPTURE \FN7108W_0049838BFD2D\0\202108	06
\2021-08-06_14_56_24.bmp	

Sound ----- Click the icon then you will hear sound captured by the camera's built-in microphone. You may need to plug in earphones or enable the computer speakers to hear from the camera's microphone. Make sure the camera supports audio. Click again and stop audio.

Section4 The number of split-screen

Click this button to select the number of split-screen on one page.

The client can monitor many cameras at one page, here you can choose the display number. The maximum number is 16.

Section5 Live Cruise / Close All / Full Screen / Hide Bar

Live Cruise ----- Click this button to Live Cruise, you can click Η button to add a

loop page for live Cruise or click 📃 button to reduce the loop page for live Cruise.

- 2 - 2, Max: 11 +

Close All ----- Click this button to close all the cameras

Full Screen ----- Click this button to enter full screen, then click to exit full screen.

Hide Bar ----- Click this button, Hide and show Pan / Tilt control Bar

4.5 Setup

Select the icon on the right side of the NVR list to do the following. Click **Setup** button, goes to **Device Settings** control panel to make advanced NVR settings.

4.5.1 Basic

Device Information

You can modify the device name. You can also see the basic information of the NVR.

Device Settings					
• Basic	~				
Device information		Device name :	NVR		
Device time					
IP		System firmware version :	2.0.0		
Port		Application firmware version :	6.1.33.140000		
Mail		MAC ID :	0049838C2654		
· Device Manager	>		004505002054		
 Application 	>	UID :	YZ94C8YXOYI8BKN5ZZZZ	428H	
· System	>				
				Save	Cancel

Device name: The Device Name is a unique name that you can give to your device to help you identify it. You can define a name for your NVR here such as NVR1. Click Save to save your changes. The alias name cannot contain special characters.

System firmware version: Display the system firmware version of your NVR.

Application firmware version: Display the application firmware version of your NVR.

MAC ID: Display the MAC address of your NVR. For example Device ID is 0049838BFD2D, the same MAC ID sticker is found at the bottom of the NVR.

Device time

This section allows you to configure the settings of the internal system clock for your camera. You can set the time zone, device time, date format.

			Device Settin	ıgs				×
• Basic	\sim							
Device information		Time zone :	(GMT +08:00)	Beijina, Sina	apore. Taipei	•		
Device time			Synchroniz					
IP			Sync with N		aevice			
Port		Device time :	8/11/2021	15	15 🔻	31 🔻	55 👻	
Mail • Device Manager	>		Sync with PC					
· Application	>	Date format :						
· System	>		 YYYY-MM-DD 24 MM-DD-YYYY 12 					
			O DD-MM-Y	YYY 24				
			🗹 Use DST					
		From :	February 🔻	•	Monday *	02 💌	: 00	
		To :	October 👻	•	Sunday 🔻	02 🕶	: 00	
		DST :	0 -	Minute(s)				
						Save		Cancel

Time zone: Select the time zone for your region from the drop down menu.

Synchronize time to the device: After checking the **Synchronize time to the device** checkbox, you can set the device time, or click the **Sync with PC/terminal** button to synchronize the PC/terminal time to your device.

Sync with NTP server: Network Time Protocol will synchronize your device with an Internet time server. Choose the one that is closest to your device.

Use DST: Select the **use DST** (Daylight Saving Time, to set the clock ahead of the real-time), then set the start time and end time of the DST, select the daylight saving time from the drop-down menu at last.

Click Save button and submit your settings.

IP

If you want to set a static IP for the device, please go to **IP** page. Keep the device in the same subnet of your router or computer.

			Device S	ettings		×
• Basic	~					
Device information		Obtain IP from DHCP :	⊖ Yes	O No		
Device time		IP address :	10.0.0.1	2		
IP		Subnet mask :	255.255	.255.0		
Port		Gateway :	10.0.0.1			
Mail		Primary DNS server :	0.0.0.0			
· Device Manager	>		0.0.0.0			
 Application 	>	Secondary DNS server :	0.0.0.0			
· System	>					
					Save	Cancel

It is recommended that you use the subnet mask, gateway and DNS server from your locally attached PC. If you don't know the subnet mask, gateway and DNS server, you can check your computer's local area connection as follows:

Control Panel--Network Connections--Local Area Connections --Choose Support--Details.

Port

This device supports HTTP Port / HTTPS Port Port. HTTP Port is used to access the device remotely.

HTTP port: By default, the HTTP is set to 88. Also, they can be assigned with another port number between 1 and 65535. But make sure they can not be conflict with other existing ports.

			Device Settings		×

Device account/Password: The Device account/Password is the user name and password you set when you first logged in to the NVR system using the monitor.

📙 Note

The NVR in the FN7108W-B4 kit can only add the IPC in the kit, and the IPC in the kit can only be used for the NVR in the kit. And NVR automatically matches IPC.

Hard disk information

You can view the hard disk information of NVR.

Click the Format local disk button to clear the hard disk information of NVR.

If your hard disk is full, you can check whether to Stop recording or Cover earliest record.

After the modification is completed, click Save button to take effect.

System logs

You can query the Alarm logs, Operation logs and System log of the NVR.

		Mon.					
		Tues.					
		Wed.					
		Thur. Fri.					
		Sat.					
		Sun.					
			_	_			
						Save	Cancel

To enable motion detection, follow the steps below:

- 1 Channel---- Select the channel that needs motion detection.
- 2 Detection switch---- Whether to enable motion detection
- 3 Set detection area----You can set the alarm area.
- 4 Human detection---- Whether to turn on detection.

5 Body Rectangle

6 Sensitivity---- It supports three modes: Low, Middle and High. The higher the sensitivity, the camera will be more easily alarmed. Select one motion sensitivity.

7 Select the alarm Action

There are some alarm indicators:

• Send E-mail

If you want to receive alarm emails when motion is detected, you must select Send E-mail and set

Mail Settings first. Make sure you have set E-mail in "Device Setting -> Basic -> Mail" interface.

Recording

If you select this checkbox, when the motion has been detected, the NVR will recording and store in

HDD.

Buzzer

If you select this checkbox, when the motion has been detected, the NVR will alert the buzzer.

8 Alarm Schedule

• Alarm anytime when motion is detected.

Click the black button up the MON, you will see all time range turn red. When something moving in

the detection area at anytime, the NVR will alarm.

• Specify an alarm schedule

Click the week day words, the corresponding column will be selected. For example, click TUE, the all column of TUE turns to red, that means during Tuesday whole day, when something moving in the detection area, the NVR will alarm.

• Press the left mouse and drag it on the time boxes, you can select the serial area.

9 Click Save button to take effect. When the motion is detected during the detection time in the detection area, the NVR will alarm and adopt the corresponding alarm indicators.

You must set the detection area and detection schedule, or else there is no alarm anywhere and anytime.

Recording schedules

On the page you can configure the schedule record.Schedule Recording only supports HDD.

Select the recording channel. Check the **Enable schedule** checkbox, then you can set the schedule for recording.

Click Save button to take effect.

HDD Alarm

When the hard disk is error, lose or full, you can set the NVR alarm.

		Device Settings		
Basic Device Manager Application Motion detection Recording schedules	> > >	HDD error Screen Display Buzzer

Video Loss		Buzzer		
OSD		HDD full		
Video encode		Lower Limit (G) 1 (1 ~ 30 G)		
Color adjustment		Screen Display		
• System	2	 Buzzer Send email 		
			Save	Cancel

Video Loss

When the video is lost, you can set an alarm message.

To enable motion detection, follow the steps below:

1 Channel---- Select the channel.

2 Action

Send E-mail

If you want to receive alarm emails when video loss, you must select Send E-mail and set Mail

Settings first. Make sure you have set E-mail in "Device Setting -> Basic -> Mail" interface.

Buzzer

If you select this checkbox, when the video has been loss, the NVR will alert the buzzer.

OSD

This page is used to add time and device name on the video.

Recording schedules		Resolution :		•	
HDD Alarm		Bit rate :		•	
Video Loss		Frame rate :		•	
OSD					
Video encode					
Color adjustment					
System	>				

Channel: Select the channel.

Stream: There are two types to identify different streams you have set.

Resolution: The camera supports multiple types in the channel, For example: 2K,3M,1080P, 720P,

VGA. The higher the resolution is, the clearer video will become. But the code flux will become larger

too, and it will take up more bandwidth. (Different models support different specific types.)

Bit Rate: Generally speaking, the larger the bit rate is, the clearer video will become. But the bit rate configuration should combine well with the network bandwidth. When the bandwidth is very narrow, and bit rate is large, that will lead to video can not play well.

Frame Rate: Note that a larger frame size takes up more bandwidth. When the video format is 50Hz, the maximum frame rate is 25 fps. When the video format is 60Hz, the maximum frame rate is 30 fps. You should lower frame rate when the bandwidth is limited. Normally, when the frame rate above 15, you can achieve fluently video.

Click Save button to take effect.

Color adjustment

You can adjust the settings to your liking.

· Device Manager	>			
Application Motion detection Recording schedules	> Channel : > Brightness : Contrast :	1 ~	100100

		Save Cancel	

5 Appendix

5.1 HDD Capacity Calculation

This chapter describes how to determine the size of the HDD you need when you install the NVR for the first time.

The NVR adopts the MPEG4/H.264 compression technology and its dynamic range is large.

Therefore, the capacity of the HDD depends on the estimated size of files generated in each channel every hour according to code streams.

Computational formula of HDD Capacity:

Whole HDD Capacity(M)= number of the channels * time in need (hour) * spent of HDD Capacity per hour (MB/hour)

The meanings of parameters are as follows:

- Number of the channels: Number of channels where you need to enable recording.
- Time in need (hour): Time you need to record.
- Spent of HDD Capacity per hour

Spent of HDD Capacity per hour(M/hour) = $\frac{BitRate}{8bit} * 3600(\sec ond)$

You can obtain the Bit Rate by using the following methods:

-In the GUI interface, choose Menu > Settings > Video , view the value of the Bit Rate.

-In the Web interface, choose **Parameter Configuration > Local settings > Encoding Scheme**, view the value of the **Bit Rate**.

[Example]

If you select 4M for the bit rate and select four channels for recording and one week of recording is needed, you can calculate the HDD capacity by using the following formula:

Recording time(hour) =7days*24 hours=168 hour

Spent of HDD Capacity per hour(M/hour)= $\frac{4Mbit}{8bit}$ * 3600 =1800M/hour

Whole HDD Capacity(M)=4*168(hour)*1800 (M/hour) =1209600M,

 $1209600M = \frac{1209600M}{1024} = 1181.25G$

According to the preceding calculation result, you are advised to buy a HDD of 1.5 TB or above.

5.3 FAQ

1. No image displayed on the monitor after starting up normally.

- Verify the device is connected with the monitor via HD-OUT or VGA cable.
- Verify the connection cable is good.
- Verify Input mode of the monitor is correct.

Please check the input mode of the monitor matches with the output mode of the device (e.g. if the output mode of NVR is HD-OUT output, then the input mode of monitor must be the HD-OUT input). And if not, please modify the input mode of monitor.

2. No record file found in the NVR local HDD, and prompt "No record file found".

• Verify the system time setting is correct.

Choose Menu > Settings > General in the GUI interface, and verify the time is correct.

• Verify the search condition is correct.

Choose Menu > Playback in the GUI interface, and verify the channel and time are correct.

• Verify the HDD status is normal.

Choose Menu > About > HDD Info in the GUI interface, view the HDD status.

3. Why recording is not performed after motion detection is enabled?

On the "Motion Detection" page, check whether the following are correctly set:

- Check whether the motion detection channel is correct.
- Check whether a trigger time segment is set.
- Check whether a detection area is set.
- Check whether recording is selected.

4. The screen of the display is incomplete.

Confirm the current resolution and check the resolution supported by the display. If the resolution is 1920*1080, the display needs to support the resolution 1920*1080.

5. Why can't video files be downloaded during video playback or downloaded files cannot be played back properly?

To save consumed resources, the server limits concurrency of video playback and file download. In this case, stop video playback and then download files or play back videos after video files are downloaded.

5.4 Glossary

Acronym	Term	Description
DDNS	Dynamic Domain Name Server	Dynamic DNS is a method, protocol, or network service that provides the capability for a networked device, such as a router or computer system using the Internet Protocol Suite, to notify a domain name server to change, in real time (ad-hoc) the active DNS configuration of its configured hostnames, addresses or other information stored in DNS.
DHCP	Dynamic Host Configuration Protocol	DHCP is a network application protocol used by devices (DHCP clients) to obtain configuration information for operation in an Internet Protocol network.
HDD	Hard Disk Drive	A storage medium which stores digitally encoded data on platters with magnetic surfaces.
PPPoE	Point-to-Point Protocol over Ethernet	It is a network protocol for encapsulating Point-to-Point Protocol (PPP) frames inside Ethernet frames. It is used mainly with ADSL services where individual users connect to the ADSL transceiver (modem) over Ethernet and in plain Metro Ethernet networks.
PTZ	Pan, Tilt, Zoom	PTZ cameras are motor driven systems that allow the camera to pan left and right, tilt up and down and zoom in and out.
NTP	Network Time Protocol	A protocol designed to synchronize the clocks of computers over a network.
NVR	Network Video Recorder	A NVR can be a PC-based or embedded system used for centralized management and storage for IP cameras.
VMS	Video Management System	Foscam VMS is a new tool for PC. It does not require plug-ins and is compatible with Windows & Mac, It supports all Foscam HD cameras and up to 36 cameras at the same time.

5.5 CE & FCC

Electromagnetic Compatibility (EMC)

FCC Statement

This device compiles with FCC Rules Part 15. Operation is subject to the following two conditions.

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the installation manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is like to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

FCC Caution

Any changes or modification not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

CE Mark Warning

CE

5.6 WARRANTY

FOSCAM values your business and always attempts to provide you the very best of service. No limited hardware warranty is provided by FOSCAM unless your **Foscam** product ("product") was purchased from an authorized distributor or authorized reseller. Distributors may sell products to resellers who then sell products to end users. No warranty service is provided unless the product is returned to an authorized return center in the region where the product was first shipped by FOSCAM or to the point-of-purchase, which may have regional specific warranty implications.

If you purchase your Foscam product from online store, please contact the point-of-purchase and ask for return / replacement / repair service.

Limited Hardware Warranty

- The products are warranted to be free from manufacturing defects in materials and workmanship starting from the shipping date of **Foscam**.
 This limited hardware warranty does not cover:
- Software, including the software added to the products through our factory-integration system, software, etc.
- Usage that is not in accordance with product instructions.
- Failure to follow the product instructions.
- Normal wear and tear.

Return Procedures

- Please read Foscam warranty policy & policy of your reseller first before sending items back to point-of-purchase.
- Customer must first contact point-of-purchase to obtain a Return Merchandise Authorization (RMA) number before returning the product. If the product you received is suspected to be defective and the product warranty has not expired, The RMA number will allow your reseller to track your return much easier and help them expedite processing your request.
- After receiving your RMA case number, pack the item(s) very well with the original box and all the original accessories included such as power adapters, brackets, cables, manuals.
- Write your RMA number and the return reason (the problem of the product) on the warranty card along with the complete package to send them back.

Replacement Services

- If customers ask for replacement service, please contact point-of-purchase and follow their policy.
- Our technicians will inspect all items returned for replacement requests. If the retuned product is found in working order, we will return the same item received. However customers shall be responsible for all shipping & handling charges incurred for getting the units back to customers.
- If returned products are found defective, we will replace the product and assume the shipping cost

for sending back the replacement unit to customers.

- If for any reason, we are unable to provide a replacement of the original returned item(s). You will have a choice for a "Substitute" item at the same equal value.
- We do not provide exchange and replacement due to normal hardware upgrade according the market after 14 days after the product is delivered.
- Our technicians will test the product before send out the replacement, any other demand for more than two times replacement for the same product during replacement limit will be rejected.
- Replaced products are warranted from the balance of the former warranty period.

Warranty Forfeiture

- Warranty is void if purchase from unauthorized distributor or reseller.
- Warranty is void if trade-mark, serial tags, product stickers have been removed, altered or tampered with.
- Warranty is void for mishandling, improper use, or defacing the product.
- Warranty is void for physical damage, altered, either internally or externally, improper or inadequate packaging when returned for RMA purposes.
